The free software from Radio shack makes it so much easier to program. It was done in less than 5 mins.
I need to pay for the full version.

I use Win500. Purchased it back when i got my Pro 197. All i did was cloned the 651 from the 197. Took about 2 minutes. In the process of weeding out the frequencies that have went encrypted here locally. After that is done, I will program both of them.

Just joined this PRO-651 Group. Would like to know who uses what software to program their PRO-651 Scanner Win 500 or ARC 500, which one do you use and why? Is one better or easier to use? Also if interfacing with Radio Reference to download frequencies which software works easier or better etc. Any input would be appreciated. Thanks for your help. Dave

I use WIN500, ARC cost to much, PSE edit would sometimes crash after a scanner upload. Having no problems at all with WIN500. As far as ease of use they are all about the same only minor differences between the look and operation.

Oh and I almost forgot WIN500 has a record function that records the audio and tags the saved audio file with the time and freq, alpha tag talk group, etc. very handy if you want to keep up with any ongoing situations and cant be there to monitor your scanner. The other two don't have this.

Hi,

I use ARC500 by default. The free 30 day trial didn't work, it said I already used the 2 free downloads, which I didn't, I was impatient and purchased it anyway since RR promotes it, I use RR for most frequency data I felt comfortable. I just updated ARC500 to Ver. 1.08 and it works well.
ARC took some time to figure out the quirks, although it may have been just me, not really all that savvy with software. I find that the owner of ARC responds quickly and support is great.

An example, I was having trouble entering a multi-site EDACS system into my 651, (my PSR-800 software and scanner just downloaded every site and uploaded at once and done), but the 651 functions differently, had to download each site into a separate scanlist, there are 13 different sites here in Vancouver BC, it wasn't a software problem like I first thought, plus the thought of taking up 13 scanlists out of 20 was hard to take, I created a V Scanner file and use the site I am closest to while traveling, it became no issue, after I received info and support from ARC that is.

WIN500 is cheaper by a bit and has features this doesn't have but I always follow a simple rule in life, you get what you pay for and not all is perfect.

Ron

From: cwbrower@...
Topic: 25 Message: 25

I programmed in Glendora CA control channel 451.17500 using WIN500. I also put in the alternate control channels. When the audio comes on it is garbled and shows channel 451.900000 or channel 451.837500 as priority channel. Does this even when priority is set off.

It is normal for trunked systems to show non-programmed frequencies, as
that is how they work.

Thanks. I'm just trying to figure out why it is garbling (motor boating). I am new to this radio and my last was the PRO-95 and was easy. I thought I had it figured out and even went in manually to check the frequencies. I subscribed to a prime membership and will buy WIN500 so it may take a while.

You should be able to hear the encrypted signal as-is. But nothing
you can do will let the scanner decode the encrypted signal.

I forgot to ask a question about the 200-0546 programming cable.
In the package there is an adapted that goes from 3 contact to 2 contact.

Which connector is used for which scanner (Pro-651 and Pro2096), the 2 or the 3 contact plug?

Is there any documentation stating of which plug is used on which radios listed on the back of the package?

46. PRO-651 For Sale

Yahoo group: PRO-651
Date: 2016-02-17 05:05:47 UTC
From: kd7krh@...
Topic: 46 Message: 46

I have a friend who bought three of the PRO-651s, one for the car, one for the truck and one for the house.
But not long after that, his car decided quit on him and he needs to sell two of them ASAP to fix it.
The two he wants to sell are still in their original boxes and have never been turned on..
He is asking $250 each for two of them, but he might come down a little. I bought the third one.
Is there anyone out there that wants to buy the other two radios?

I looked on Radio Shack's website and I saw them being sold for a lot more than that.

If so, I can give him your contact information and you can deal directly with him for payment and shipping.

47. Firmware Updates

I have 2 Pro-651 scanners, one with firmware 2.8 and one with 2.6. On RR there is an update to 2.9 which fixed some EDACS issues. I was able to update the 651 that had ver2.8 easily to 2.9 however the scanner with ver2.6 won't accept it, scanner just goes from update mode right to scanning after attempting to update it. Anyone else have this issue? Been working on this in RR but no solution yet.

Does anyone have a copy of the 2.8 update? perhaps I need to go from 2.6 to 2.8 and then to 2.9, not sure though. Scanner works perfectly other than not being able to update it.

48. 651 not charging

Pro 651 does not seem to be charging my batteries when connected to power supply even when turned off.
Any Ideas?

Do you have the correct battery type selected.

Duh, never gave it a thought, will have to check, if I can find my manual to see how to do it.

Turn scanner on then select the light button scroll down and select correct battery type then select save. I assume you are using the yellow battery case which is for chargeable batteries.

I once, inadvertently, applied 14 volts, instead of 9 volts, to the power jack. Now mine doesn't charge internally either ;-)

went into the menu system and when I brought up battery type it showed NIMH, but I went ahead and reselected just in case. will try it again.

I found the charging setup in the menu, set it up to charge for 12 hrs. Does the unit have to be left on?when the charging timer starts can you select done and continue to monitor while it charges? Is there any documentation available from Radio Shack that gives instructions on the charging of the 651?

Oh, that I wish charging of battery whilst internal were more clearly described in RS (& other) literature.

I've given up and yank em to charge in an external 'smart' charger.

Get about twice the play time.

FWIW,
KX8XX

after loading from RR state ,county and talk group
to software , How do I select which bank (1-10)
to put them in. so I can upload to HH
